Parent Guide to the Smarter Balanced Summative Assessments

Overview and Sample Questions
Acknowledgments

The Parent Guide to the Smarter Balanced Summative Assessments was developed by Sally Bennett-Schmidt of the San Joaquin County Office of Education and California Department of Education staff, with support from the California State PTA and the Smarter Balanced Assessment Consortium. It was designed and prepared for printing by San Joaquin County Office of Education.

Introduction

The purpose of this guide is to provide information about the Smarter Balanced Summative Assessments, including sample test items for English language arts/literacy (ELA) and mathematics. This information will help parents better understand their children’s test results. The Smarter Balanced Summative Assessments are part of the California Assessment of Student Performance and Progress (CAASPP) System, which replaces the previous Standardized Testing and Reporting (STAR) Program.

Every spring, students in grades three through eight and grade eleven take the Smarter Balanced Summative Assessments for ELA and mathematics. Results from these assessments are just one piece of information to help teachers, parents/guardians, and students understand how well a student is meeting the grade-level standards.

The Smarter Balanced System includes additional resources to improve teaching and learning. These resources include formative assessment tools and interim assessments. Formative assessment is a process that teachers use every day to check on student understanding. It includes a variety of informal and formal strategies to help both teachers and students assess what students are learning. This information can then be used by both teachers and students to decide what they must do next or differently to help students learn the material they have not learned.

From time to time, teachers may also give tests to check how well students have learned the material they have been taught over a period of time and what may need to be reviewed or retaught. These types of tests, called interim assessments, may be given at the end of a few days (such as a mathematics quiz or a spelling test), after a unit of instruction (such as a chapter test or unit writing assignment), or after a few weeks (such as a quarterly test). More information about the Smarter Balanced Interim Assessments is available on the CDE’s Interim Assessments Web page at http://www.cde.ca.gov/ta/tg/sa/sbacinterimassess.asp.

A glossary of important terms used in this handbook is provided at the end.

Information on other assessments in the CAASPP System, as well links to important resources and sample responses to a constructed response item, are provided in the appendixes of this guide.
How the Online Smarter Balanced Assessments Are Different from Previous California Tests

The new Smarter Balanced Summative Assessments are very different from the old STAR tests in several ways:

- They are aligned with California’s new content standards for ELA and mathematics.
- They reflect the critical thinking and problem solving skills that students will need to be ready for college and the 21st century job market.
- They are taken on a computer and are adaptive, which means that during the test, the questions will become more or less difficult on the basis of how the student performs. If the student answers a question correctly, the next question may be a bit more challenging; if the student answers it incorrectly, the next question may be less difficult.
- They provide many more supports for students who need them, including students learning English and students with disabilities, as described in the section below.

Accessibility Supports and Accommodations

The computer-based Smarter Balanced Summative Assessments provide all students with greater flexibility than traditional pencil-paper tests. For example, students can increase the size of an image using the “Zoom In” option or highlight key words as they read a passage. Additional accessibility supports also are available for English learners and students with individualized education programs (IEPs) or Section 504 plans. For example, some students may access translations or American sign language.

For more information, please see the CDE Student Assessment Accessibility Supports 2014–15 Web page at http://www.cde.ca.gov/ta/tg/ca/sass1415.asp.
Item and Task Types

The Smarter Balanced assessment system includes a variety of item types, including:

- Selected-response items, which prompt students to choose one or more answers.
- Technology-enhanced items, which might prompt students to edit text or draw an object.
- Constructed-response items, which prompt students to write a short written or numerical response.
- Performance tasks, in which students engage in a complex set of tasks to demonstrate their understanding. (Students may be asked to conduct research and then write an argumentative essay, using sources as evidence. Or they may be asked to solve a complex problem in mathematics. Performance tasks integrate knowledge and skills across many areas and standards.)

Parents can take the Practice Test to see the different types of questions that students will be given on the Smarter Balanced Assessments. The Practice Test is posted on the Smarter Balanced Practice and Training Tests Web page at http://www.smarterbalanced.org/practice-test/.
How Student Performance Is Reported on the Smarter Balanced Assessments

Student performance is reported in several ways, as explained below.

**Overall Score and Achievement Level**
For each grade level and subject area, students receive a score from approximately 2000 to 3000. The overall score falls into one of four achievement levels:

- **Standard Exceeded**: The student has exceeded the achievement standard and demonstrates advanced progress toward mastery of the knowledge and skills needed for likely success in future coursework.

- **Standard Met**: The student has met the achievement standard and demonstrates progress toward mastery of the knowledge and skills needed for likely success in future coursework.

- **Standard Nearly Met**: The student has nearly met the achievement standard and may require further development to demonstrate the knowledge and skills needed for likely success in future coursework.

- **Standard Not Met**: The student has not met the achievement standard and needs substantial improvement to demonstrate the knowledge and skills needed for likely success in future coursework.

See the CDE’s Smarter Balanced Scale Score Ranges Web page at [http://www.cde.ca.gov/ta/tg/ca/sbscalerange.asp](http://www.cde.ca.gov/ta/tg/ca/sbscalerange.asp).

**Area Achievement**
The test reports show how a student performed in key areas, also called **claims**, in ELA and mathematics.

- **ELA Areas**: Reading, Writing, Listening, and Research/Inquiry

- **Mathematics Areas**: Problem Solving & Modeling/Data Analysis, Concepts & Procedures, and Communicating Reasoning
For each area, a student’s performance is represented as “Above Standard,” “At or Near Standard,” or “Below Standard.”

A sample student score report is provided on the CDE’s CAASPP Individual Score Reports Web page at http://www.cde.ca.gov/ta/tg/ca/caaspp15rpttalkpts.asp.

The CDE video Understanding Your Child’s Score Report is posted on the Youtube channel at https://www.youtube.com/watch?v=FQi4qI0Crwk. This video describes and explains the 2015 CAASPP Student Score Report. A Spanish version of the video is available on this site.

Although the results of the state tests are important, they are just one way to assess the progress of students. Students and parents should review the test results in combination with report cards, class assignment grades, and teacher feedback.

How Reports are Used

Results from the Smarter Balanced Summative Assessments provide one piece of information about a student’s academic performance that can:

- Help facilitate conversations between parents/guardians and teachers about student performance.
- Serve as a tool to help parents/guardians and teachers work together to improve student learning.
- Help schools and school districts identify strengths and areas that need improvement in their educational programs.
- Provide the public and policymakers with information about student achievement.
The Smarter Balanced Summative Assessments for ELA are organized by four areas, or claims.

<table>

For more information, see the Smarter Balanced Assessments Web page at [http://www.smarterbalanced.org/smarter-balanced-assessments/](http://www.smarterbalanced.org/smarter-balanced-assessments/).
Grade Three ELA

In grade three, students build important reading, writing, listening, and research skills. They think, talk, and write about what they read in a variety of articles, books, and other texts. In their writing, students pay more attention to organizing information, developing main ideas, and supporting these ideas with facts, details, and reasons. They develop listening skills and participate in class discussions by sharing their ideas and building on the ideas of others.

For more information, see the Parent Roadmap–Supporting Your Child in Grade Three, English Language Arts, which is posted on the Council of the Great City Schools Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=416&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=719&PageID=330.

A Spanish version of the publication is available on the same Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=427&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=729&PageID=365.
Grade Three Sample Test Items for ELA
This section provides sample ELA test items for grade three.

Notes About Sample Test Items

The test items that students see online appear and function differently than the sample items shown in this document. For example, students may be asked to “drag,” “select,” or “click” their response. Parents can experience these different functionalities on the Training Test available on the CAASPP’s Smarter Balanced Practice and Training Tests Web page at http://www.caaspp.org/practice-and-training/index.html.

The sample test items presented in this guide represent the kinds of passages and questions that grade three students at different levels of achievement would likely answer correctly. For example, a student at the “Standard Met” achievement level would typically receive and correctly answer an item associated with that achievement level.

Please note that these sample items represent only a few of the standards that are assessed on the Smarter Balanced Summative Assessments for ELA. (An online version of the sample items is in development.)

For each sample test item, the following information is included:

- ELA area for the item
- ELA state standard(s) that the item measures
- Correct answer(s)
Grade Three Sample Test Item—Listening
Achievement Level: Standard Met

Birds’ Nest Safari (Excerpt from Birds’ Nest Safari by Judyann Grant. Copyright Highlights Magazine. Reprinted with permission of Highlights for Children.) Listen to the presentation. Then answer the questions.

Please note that the following text would not appear on the actual test. Since this is a listening item, the text would be recorded, and students would listen to a recording of the text.

In this presentation, you will hear a speaker talk about birds’ nests. Listen to the presentation and then answer the questions that follow.

A good time to spot birds' nests is after the leaves have fallen and the birds have gone. Many times, you can tell which kind of bird made a nest. To do that, notice where you see the nest, the shape of the nest, and what things were used to build it.

You may not see nests the first time out. Don’t give up. Some birds hide their nests to keep their babies safe. With patience and practice, you will spot their nests.

House wrens build their nests in small hollowed-out places. They are not too choosy about where they build. They have even used old boots and the pockets of scarecrows’ shirts.

Gray catbirds prefer to build in briar patches and other thickets. Their nests are loosely made of weed stalks, leaves, and twigs. These birds use strips of grapevine bark inside their deeply cupped "cradle."

The orioles’ pouch-nest is one of the easiest to spot. It looks like a bag swinging at the end of a branch. The slightest breeze sends it swaying.

In a notebook, write down each place and tree where you spotted a nest. Draw a picture of it. In the spring, you can note which birds return to build new nests.

Excerpt from Birds’ Nest Safari by Judyann Grant. Copyright Highlights Magazine. Reprinted with permission of Highlights for Children.
Grade Three Sample Test Item—Listening
Achievement Level: Standard Met (continued)

What does the speaker hope the listener will learn from the presentation? Pick two choices.

A. how to find birds’ nests  
B. how to build birds’ nests  
C. how to draw birds’ nests  
D. how to tell birds’ nests apart  
E. how to keep birds’ nests safe

<table>
<thead>
<tr>

</thead>
<tbody>
<tr>
<td></td>
<td>Demonstrating effective communication skills</td>
<td>Determine the main ideas and supporting details of a text read aloud or information presented in diverse media and formats, including visually, quantitatively, and orally.</td>
<td>A (how to find birds’ nests) and D (how to tell birds’ nests apart)</td>
</tr>
</tbody>
</table>

Note: Students must identify both A and D to receive the full point. There is no partial credit on selected response (i.e., multiple choice) items.
Grade Three Sample Test Item—Reading
Achievement Level: Standard Exceeded

Read the poem and answer the questions.

Waiting for Change

The dirt is cool, still dark and damp from yesterday’s rain. The seed in my hand looks like a period at the end of a sentence, but unlike the period, this seed is the beginning of something grand.

I push the seed into the soil. Later I scrub my hands and nails, soap bubbling up in the sink like the tiny bubbles of water at the bottom of a waterfall.

Each morning before school, I look at the corner of the garden where I planted the seed, but to my eye nothing has changed. I think of how the television looks when it is off—dark and sitting quietly. I know there is a whole world inside both the TV and the seed waiting to present itself.

Light rain begins to fall as I drift off to sleep, reminding myself I must be patient. I imagine the rain might awaken whatever is inside the seed I planted. But in the morning, there is still no sign, just little impressions left in the ground by the rain.
I wait and watch for one whole week, but nothing happens. I've decided that maybe the seed was planted too deeply in the ground. I begin to think the seed has lost its way, just like my dad when he took one wrong turn and ended up in a place unknown.

And then, on the day I'm ready to give up—the seed begins to sprout! The plant rises above the earth, and by the afternoon it has stretched its leaves, ready to grow throughout the season.

How does the speaker change from stanza 5 to stanza 6?

A. The speaker is puzzled, and then the speaker feels foolish.
B. The speaker is watchful, and then the speaker gives up.
C. The speaker is worried, and then the speaker is pleased.
D. The speaker is angry, and then the speaker is surprised.

Area: Reading

Reading: Demonstrating understanding of literary and nonfiction texts

Standard(s): Describe characters in a story (e.g., their traits, motivations, or feelings) and explain how their actions contribute to the sequence of events.

Answer: C
Grade Three Sample Test Item—Reading
Achievement Level: Standard Exceeded

This next question is also based on the poem, “Waiting for Change,” on pages 11 and 12. The question has two parts. First, answer part A. Then, answer part B.

Part A

Click on the sentence that best explains what the use of the character’s actions shows about the relationship between the speaker and the events in the poem.

A. The events change the speaker.
B. The events follow a mistake made by the speaker.
C. The events would have happened without the speaker.
D. The events happen because of the actions of the speaker.

Part B

Click on the line from the poem that best illustrates the relationship made in part A.

this seed is the beginning of something grand.
I push the seed into the soil.
Later I scrub my hands and nails,
I look at the corner of the garden
but to my eye nothing has changed.
Light rain begins to fall as I drift off to sleep,
the seed begins to sprout! The plant rises above the earth,

Reading
Demonstrating understanding of literary and nonfiction texts
Standard(s)
Describe characters in a story (e.g., their traits, motivations, or feelings) and explain how their actions contribute to the sequence of events.
Answer
Part A: D
Part B: The line, “I push the seed into the soil.”
Read the text and answer the question.

Digging into the Past
Imagine you are digging in a garden or walking across a field. You find a stone arrowhead or an old broken pot. These objects could be clues to how people lived long ago.

Studying the Past
The study of human life in the past is called archaeology. Scientists who study people who lived long ago are called archaeologists. Old tools, bones, and buildings are clues to how people lived.

Archaeologists look for places where early humans lived, hunted, farmed, or gathered food. They learn about the people by studying the objects that were used in the past. They can discover how people lived and worked. They can find out what people wore and what they ate.

Finding the Clues
Finding a place where people may have lived long ago is only the first step. Finding the clues to how people lived requires careful study. The objects people used may be buried. Because archaeologists dig into the ground to look for clues, the site is called a dig. A dig could be in a cave, a forest, a desert, or a modern city.

At a dig, archaeologists divide the ground into sections. Then, they carefully remove dirt from each section. They use special tools such as small shovels and brushes. Each section must be searched slowly. If a tool or piece of pottery is found, it is photographed and notes are taken before it is carefully removed from the ground. These objects are called artifacts. An artifact can help explain how people lived in the past.
Knowing Where to Dig

Places for digs can be discovered by accident. Someone plowing a field might discover a bone or a tool. Archaeologists would go to the site and decide if it was a good place for a dig. Artifacts are sometimes found when a building is being constructed. Then work is stopped. Archaeologists and others are given a chance to study the site before construction continues.

In recent years, archaeologists have found other ways to decide where to dig. They read old texts. The writings may provide clues to where people lived. They use satellites to study large areas of land. Computers can also help. Models of what ancient towns might have looked like can be created. These new methods give archaeologists ideas about where to dig.

If archaeologists think artifacts are present, they do a survey, or study of an area. They look for anything that shows that people may have lived there. They look for the remains of old buildings. These could include houses or huts. They also use tools to help find metal objects that are buried. A survey helps them decide if an area should become a dig.

What Archaeology Teaches Us

Archaeology helps us understand the past. Putting together a story about the past is like doing a big puzzle. The problem is we don’t have a box lid to show what the completed picture should look like. Artifacts are some of the pieces, but they are only part of the big picture. Artifacts are taken back to a lab and studied closely. Then archaeologists put together pieces of the past.

Most of human history is not written down. Sometimes, even written history is an incomplete story. We are left to find out the rest. So archaeology is important. It is how we learn about people and the ways they used to live. Archaeologists try to answer questions. They might try to find out what jobs people had or what families did for fun. The answers teach us about history.
Grade Three Sample Test Item—Reading
Achievement Level: Standard Exceeded (continued)

What is the main idea of the **Finding the Clues** section? Use details from the passage to support your answer.

**Area**

**Reading**
Demonstrating understanding of literary and nonfiction texts

**Standard(s)**
Determine the main idea of a text; recount the key details and explain how they support the main idea.

**Answer**
Constructed response: Students write a short response, identifying the main idea of the section and support their answers with specific details from the text. A scoring rubric and sample responses for this item appear in Appendix C.
Grade Four ELA

In grade four, students continue to build important reading, writing, listening, and research skills. They read more challenging literature, articles, and other sources of information and continue to grow their vocabulary. They are also expected to clearly explain in detail what they have read by referring to details or information from the text. In writing, students organize their ideas and develop topics with reasons, facts, details, and other information.

For more information, please see the Parent Roadmap—Supporting Your Child in Grade Four, English Language Arts, which is posted on the Council of the Great City Schools Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=416&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=720&PageID=330.

A Spanish version of the publication is available on the same Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=427&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=730&PageID=365.

Grade Four Sample Test Items for ELA

The sample test items that follow represent the kinds of passages and questions that grade four students at different levels of achievement would likely answer correctly. For example, a student at the “Standard Nearly Met” achievement level would typically receive and correctly answer an item associated with that achievement level.
Liam leaped to his feet and tore off his mask. The batter had hit Carter’s pitch, but it wasn’t a clean blast to the outfield. No, that ball was shooting straight up like a rocket ship—and Liam needed to be directly under it when it came back to Earth!

His brown eyes locked onto their target. He lifted his glove. It was a make-or-break moment. Make the catch, and the game was theirs. Miss it, and he’d break the hearts of his teammates, not to mention the thousands of fans who’d traveled to see their local team in action.

Liam’s and Carter’s families were among those fans. Liam knew exactly where they were sitting. Before the game, they had unfurled a huge banner that read “Mid-Atlantic All the Way!”

The banner had been his mother’s idea. “We’ll paint the words in neon colors on a long bolt of fabric,” she declared, fanning her hands out to diagram a headline in the air. “The Mid-Atlantic fans will love it!”

“Unless it’s in front of them and blocking their view of the field,” Carter’s mother pointed out.

Her sister waved her objection away. “Then we’ll take it up to the hill and invite everyone to gather under it! Imagine all of us cheering together, one big booming voice, as our home-state heroes play their way to the title!”

Liam, Carter, and everyone else in their families had pitched in to make the banner. Liam’s older sister, Melanie, had even offered to hold one end, although she made it clear she had an ulterior motive.

“Their games are shown live on one of the big sports networks, right?” she’d said the week before the tournament. “They always pan around the crowd, looking for stuff like this banner. When that camera lands on me, it could be my big break.”
While Liam dreamed of one day playing professional baseball, Melanie longed to make it in show business. She took every dance, voice, and acting class their small town had to offer, and performed in local theater productions. She’d once thought that New York City was where she should be, but a two-week family vacation to California the summer before had changed that. Now living near Los Angeles was all she could talk about.

For Liam’s part, he couldn’t imagine leaving Pennsylvania for California. He’d had a great time on their vacation. The people they’d met had been friendly and helpful, the weather had been great, and the food even better. But compared with Pennsylvania, everything about California was just so . . . different.

That afternoon, when he saw the banner on the hillside and heard the cheers from the crowd gathered by it, his heart swelled with pride and determination. Those feelings stayed with him throughout the game. They thrummed in his chest when he hit the RBI triple that gave the Mid-Atlantic players their fifth run of the game. They powered him through the long fifth inning, when Great Lakes threatened to overtake Mid-Atlantic by racking up four straight runs. And those feelings surged in his veins when Coach Harrison pulled the starting pitcher, Daniel Cho, and put Carter on the mound for the final inning instead.

His pride peaked when Carter stopped Great Lakes’ rally cold. Now his determination to win took over as he tracked the ball in the air above him. It reached the top of its climb and started its descent. Liam shuffled sideways. He widened the fingers of his glove a hair more. A moment later—Thud! The ball landed in the pocket and stuck there.

“Yer out!” the umpire yelled.

The fans erupted, roaring, clapping, and stamping their feet. Liam leaped into the air, only to be brought back to earth when his teammates swarmed him, their screams of victory ringing throughout the ballpark.

Final score: Mid-Atlantic 5, Great Lakes 4.

“Catch to Win” by Matt Christopher from Play Ball! Copyright © 2013 by Little, Brown and Company.
Why did the author choose to begin the first two paragraphs with the baseball game and return to it at the very end of the passage?

A. The author knows changing topics holds the readers’ interest.

B. The author wants to hook the readers and keep them interested in learning who wins the game.

C. The author wants to carry on two story lines.

D. The author did not feel the game is as important as other events in the story.

Answer: B
What a Yawn
from Ask Magazine

Want to know who is looking at you in a crowd? Try this: Pretend to yawn. Open your mouth really wide, and scrunch up your eyes. For added drama, you might stretch. Then look around. Anyone else yawning? If they are, they were probably watching you. Yawning is so contagious that one person yawning will make others do the same.

Yawning is really a six-second mystery, from the opening to the closing of your mouth. Humans and all other mammals do it, and so do some fish and reptiles. Birds do it. Eleven-week-old unborn human babies do it. But no one really knows why.

Pay Attention When I Yawn at You

Most people believe that we yawn because we are tired, which is partly true. But scientists have other theories too.

In apes and monkeys, yawning by the leader of the group may signal that it’s time for a change in the group’s activity: “YAWN ... It’s time for us all to go to sleep,” or “YAWN ... It’s time to hunt.” Once the leader yawns, everyone else in the pack yawns back, signaling that they understand. (A big yawn also gives the leader a chance to show off his long, sharp teeth and remind young upstarts not to bother him while he is sleeping.)

Perhaps yawning is your body’s way of telling you it’s time for a change. Think about when you yawn. As you wake up, you might stretch and yawn. Your body is ready to do something besides sleep. You might yawn at bedtime, preparing yourself for dreamland. Sometimes, if you’ve had a long day at school, you yawn during class. Your body is really ready for a change then.

Some scientists believe that yawning is also a way of keeping the brain alert. If you are bored or drowsy, but you know you have to read one more chapter, yawning increases blood flow to the brain to stimulate it. Prior to big competitions, athletes yawn a lot, and dogs under pressure to perform will yawn over and over. Even Siamese fighting fish yawn before they attack. When it's time to be alert, the brain sends out chemical signals, and before you know it, you are yawning.
Catching the Yawns

And yes, yawning is contagious, though experts are not certain why. It may have something to do with those monkeys who yawn at each other to coordinate activities. Humans don’t yawn for that reason, but yawning still has the same effect. When someone in the room yawns, nearly everyone else will, too.

Even just thinking about it can trigger a yawn. We won’t take it personally if you yawned several times while reading this article. Perhaps your body needs a change.

Select the three sentences that should be included in a summary of the passage.

A. Yawning in class is a common occurrence.

B. Even reading about yawning can cause a person to yawn.

C. Scientists are unsure why people yawn, but have developed a few theories.

D. Both animals and humans yawn when they are preparing to switch activities.

E. Yawns often occur when people or animals are preparing for an event which requires alertness.

F. When an ape leader yawns, it gives him a chance to frighten the younger apes by showing his long, pointed teeth.

Area: Reading

Demonstrating understanding of literary and nonfiction texts

Standard(s): Determine the main idea of a text and explain how it is supported by key details; summarize the text.

Answer: C; D; E
Grade Five ELA

In grade five, students continue to read more challenging literature, articles, and other sources of information and continue to build their vocabulary. Students are also expected to understand and **clearly summarize what they have learned** from readings and classroom discussions, referring to specific evidence and details from the text. Students write regularly and continue to develop their ability to **gather, organize, interpret, and present information**.

For more information, please see the *Parent Roadmap—Supporting Your Child in Grade Five, English Language Arts*, which is posted on the Council of the Great City Schools Web page at [http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceId=416&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=721&PageID=330](http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceId=416&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=721&PageID=330).

A Spanish version of the publication is available on the same Web page at [http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceId=427&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=731&PageID=365](http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceId=427&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=731&PageID=365).

**Grade Five Sample Test Items for ELA**

The sample test items that follow represent the kinds of passages and questions that grade five students at different levels of achievement would likely answer correctly. For example, a student at the "Standard Nearly Met" achievement level would typically receive and correctly answer an item associated with that achievement level.
Read the sentences from the text.

I once watched a hummingbird do a really special aerial maneuver. It dived down through a small swarm of insects, then flew back up to dive through the swarm over and over again.

Which phrase best states the meaning of “aerial maneuver” in the text?

A. a series of actions performed by the hummingbird while flying
B. a series of actions performed by the hummingbird while hovering
C. a series of beak movements that help hummingbirds catch insects
D. a series of wing movements that help the hummingbird use energy skillfully

Area: Reading
Reading: Demonstrating understanding of literary and nonfiction texts
Standard(s): Determine the meaning of general academic and domain-specific words and phrases in a text relevant to a grade 5 topic or subject area.
Answer: A
Waterbugs

When you go home from school, if you pass a pond, you are almost sure to be able to find one, or more, of the three water-bugs of this lesson, and I want you to look at them.

The first is a long, thin, black insect. He walks on top of the water, looking like a needle on legs. He is sometimes called a “needle-bug,” but more often a “water-measurer,” because he seems to measure the water with his legs as he runs. He has very fine hairs under his body and on his legs. The air between these hairs prevents him from getting wet and being drowned. He has two long feelers, and a long thin beak. His legs and body are a reddish color and his wings a glossy black. If you watch him, you will see him start all at once across the pond. He is catching a water-fly. Then he will hold it in his front claws, and suck the juice out of its body. Though the water-measurer has wings, he does not often fly. The next water-bug is not so thin. He is about an inch long, and has a flat body with grey wings folded across it. He has only very short feelers, and his front legs are thick and strong, with pincers at the end, and this is why he is called the “water-scorpion.” He uses these pincers to seize the insects in the water, and sucks them dry through his sharp beak. He swims under water very slowly, or crawls in the mud, and is easily caught. You may catch him too when he comes up to get air. This he does in a very funny way. He has two long bristles at the end of his tail. When he puts these together they make a tube like a hollow straw. He comes near the top of the water, and thrusts out the end of this tube into the air, and draws some into his body. The eggs of the mother water-scorpion are stuck on to the leaves of water-plants, and look like seeds. The last water-bug I am sure you know. He is a little fellow, rather like a beetle, with six legs, two of them being very long ones; and he swims upside down, rowing himself along with these two legs, as if they were oars. This is why he is called a “water-boatman.” He has a long, sucking beak, but you will hardly see it unless you dip him out with a glass and look close. For as he swims upside down, the bug bends his head down on his chest, so that his beak lies between
his legs. His eyes at the side of his head are very large, so that he can look both down and up. This is very useful, for he swims under tadpoles and grubs, and catches them in his claws. Then he bites them with his sharp beak, and sucks out their soft body. He is always swimming in the water, or crawling in the mud. In the evening he sometimes comes out and flies to another pond or ditch.

The mother water-boatman lays small, long, white eggs on stems and leaves in the water. You may often find them in March, and in April you may see the little bugs swimming upside down like their parents. If you take the trouble, you may catch these three water-bugs in a net, and put them in a glass, and see all I have told you.

Excerpt from *By Pond and River* by Arabella Buckley. In the public domain.
Grade Five Sample Test Item—Reading
Achievement Level: Standard Exceeded (continued)

The following question has two parts. First, answer part A. Then, answer part B.

**Part A**
Click on the statement that best describes what the information in the first and last paragraphs reveals about the author’s point of view.

A. The author most likely conducts experiments to study water-bugs.

B. The author most likely thinks that observing water-bugs is difficult.

C. The author is most likely an instructor who is teaching about water-bugs.

D. The author is most likely a student who is writing a paper about water-bugs.

**Part B**
Click on all of the phrases from the text that best support your answer in part A.

“When you go home from school, if you pass a pond, you are almost sure to be able to find one, or more, of the three water-bugs of this lesson, and I want you to look at them.”

“If you take the trouble, you may catch these three water-bugs in a net, and put them in a glass, and see all I have told you.”
Student Performance in Mathematics

The Smarter Balanced Summative Assessments for Mathematics are organized by areas, or **claims**.

<table>
<thead>
<tr>
<th>Mathematics Areas (Claims) For Grades Three, Four, and Five</th>

</table>

For more information, please see the Smarter Balanced Assessments Web page at http://www.smarterbalanced.org/smarter-balanced-assessments/.

**Grade Three Mathematics**

In grade three, students continue to **build their concept of numbers**, including developing an **understanding of fractions** as numbers. They learn the concepts behind multiplication and division and apply problem-solving skills and strategies for multiplying and dividing numbers up through 100 to solve word problems. Students also make connections between the concept of the area of a rectangle and multiplication and addition of whole numbers.

For more information, please see the Parent Roadmap–Supporting Your Child in Grade Three, Mathematics, which is posted on the Council of the Great City Schools Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=429&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=738&PageID=366.

A Spanish version of the publication is available available on the same Web page http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=431&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=748&PageID=367.
Grade Three Sample Test Items for Mathematics

This next section provides sample test items for grade three mathematics.

The test items that students see online appear and function differently than the sample items shown in this document. For example, students may be asked to “drag, select, or click” their response. Parents can experience these different functionalities on the Training Test available on the CAASPP’s Smarter Balanced Practice and Training Tests Web page at http://www.caaspp.org/practice-and-training/index.html.

The sample test items presented here represent the kinds of questions that grade three students at different levels of achievement would likely answer correctly. For example, a student at the “Standard Met” achievement level would typically receive and correctly answer an item associated with that achievement level.

Please note that these sample items represent only a few of the standards that are assessed on the Smarter Balanced Summative Assessments in mathematics. (An online version of the sample items is in development.)

For each sample test item, the following information is included:

- Mathematics area for the item
- Mathematics state standard(s) that the item measures
- Correct answer(s)
Grade Three Sample Test Item—Communicating Reasoning

Achievement Level: Standard Nearly Met

Drag a number into each box to make each statement true. You may use numbers more than once.

Area

Communicating Reasoning

Demonstrating ability to support mathematical conclusions

Standard(s)

Explain equivalence of fractions in special cases, and compare fractions by reasoning about their size.

Answer

The following responses are possible for each fraction:

\[
\frac{4}{5} > \frac{3}{5}; \quad \frac{5}{5} > \frac{3}{5}; \\
\frac{6}{5} > \frac{3}{5}; \quad \frac{7}{5} > \frac{3}{5}; \\
\frac{8}{5} > \frac{3}{5}; \quad \frac{9}{5} > \frac{3}{5}
\]

\[
\frac{0}{5} < \frac{3}{5}; \quad \frac{1}{5} < \frac{3}{5}; \\
\frac{2}{5} < \frac{3}{5}
\]

\[
\frac{3}{5} = \frac{3}{5}
\]

(2 points)
The student is able to complete all three comparisons correctly.

(1 point)
The student is able to complete 2 out of 3 comparisons correctly.
Grade Three Sample Test Item—Problem Solving & Modeling/Data Analysis
Achievement Level: Standard Met

Mr. Lowe asked his students to vote for their favorite bird. A total of 22 students voted.

</table>

Click above Hawk on the graph to show the number of students who chose it as their favorite bird.

**Problem Solving & Modeling/Data Analysis**

Using appropriate tools and strategies to solve real world and mathematical problems

**Standard(s)**

Draw a scaled picture graph and a scaled bar graph to represent a data set with several categories. Solve one- and two-step "how many more" and "how many less" problems using information presented scaled bar graphs.

**Answer**

“Hawk” constructed to show 7 hawks.
Grade Three Sample Test Item—Problem Solving & Modeling/Data Analysis
Achievement Level: Standard Exceeded

Joel is playing a number game.

- First, he subtracts 300 from a number.
- Then, he adds 25 to the new number.
- The number is a number less than 460.

Click Yes, if the number is one Joel could have started with. Click No, if the number is one Joel could not have started with.

Area | Problem Solving & Modeling/Data Analysis
Using appropriate tools and strategies to solve real world and mathematical problems

Standard(s) | Fluently add and subtract within 1000 using strategies and algorithms based on place value, properties of operations, and/or the relationship between addition and subtraction.

Answer | 736 no, 734 yes, 738 no, and 732 yes
Grade Four Mathematics

In grade four, students use addition, subtraction, multiplication, and division to solve word problems, including problems involving measurement of volume, mass, and time. Students continue to build their understanding of fractions—creating equal fractions, comparing the size of fractions, adding and subtracting fractions, and multiplying fractions by whole numbers. They also start to understand the relationship between fractions and decimals.

For more information, please see the Parent Roadmap—Supporting Your Child in Grade Four, Mathematics posted on the Council of the Great City Schools Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=429&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=737&PageID=366.

A Spanish version of the publication is available on same Web page at http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=431&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=749&PageID=367.

Grade Four Sample Test Items for Mathematics

The sample test items below represent the kinds of questions that grade four students at different levels of achievement would likely answer correctly. For example, a student at the “Standard Nearly Met” achievement level would typically receive and correctly answer an item associated with that achievement level.
Grade Four Sample Test Item—Communicating Reasoning

Achievement Level: Standard Met

Drag one number into each box to make each statement true. You may use numbers more than once.

\[
\frac{1}{2} > \square \\
\frac{1}{2} < \square \\
\frac{1}{2} = \square
\]

Area

Communicating Reasoning
Demonstrating ability to support mathematical conclusions

Standard(s)

Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as 1/2. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols \( >, =, \) or \(< \), and justify the conclusions, e.g., by using a visual fraction model.

Answer

Answers may vary
Grade Five Mathematics

In grade five, students build their understanding of the **place value system** by working with **decimals up to the hundredths place**. Students also **add, subtract, and multiply fractions**, including fractions with unlike denominators. They continue to expand their geometry and measurement skills, learning the concept of volume and measuring the **volume of a solid figure**.

A Spanish version of the publication is available on same Web page at [http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=431&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=750&PageID=367](http://www.cgcs.org/site/default.aspx?PageType=3&ModuleInstanceID=431&ViewID=7b97f7ed-8e5e-4120-848f-a8b4987d588f&RenderLoc=0&FlexDataID=750&PageID=367).

Grade Five Sample Test Items for Mathematics

The sample test items below represent the kinds of passages and questions that grade five students at different levels of achievement would likely answer correctly. For example, a student at the “Standard Nearly Met” achievement level would typically receive and correctly answer an item associated with that achievement level.
The art teacher gives stickers to the 96 students in her classes. She has 264 stickers to give out. She gives out one sticker at a time to each of her students until the stickers are all gone. How many students get more than 2 stickers?

- A 36
- B 72
- C 82
- D 96

**Area**

**Communicating Reasoning**

Demonstrating ability to support mathematical conclusions

**Standard(s)**

Find whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.

**Answer**

B
Grade Five Sample Test Item—Concepts & Procedures
Achievement Level: Standard Met

Jonas has a file cabinet in the shape of a right rectangular prism.

- The area of the base of the file cabinet is 450 square inches.
- The height of the file cabinet is 53 inches.

Enter the volume, in cubic inches, of the file cabinet.

Answer: 23850

<td>A test given on a computer.</td>
</tr>
<tr>
<td>content standards</td>
<td>Statements of academic expectations that describe what students should know and be able to do in a subject area.</td>
</tr>
<tr>
<td>formative assessment</td>
<td>A process teachers use during instruction to check on student understanding.</td>
</tr>
<tr>
<td>interim assessment</td>
<td>A test given at regular intervals, such as a chapter test, to evaluate what students have learned.</td>
</tr>
</tbody>
</table>
### performance task
A connected set of questions and activities, based on a theme or scenario, in which students apply their knowledge and skills to real-world problems. In the Smarter Balanced assessments, students do a performance task in English language arts/literacy and one in mathematics. The performance task includes a classroom activity, done with the teacher, to introduce vocabulary and make sure all students have basic knowledge and understanding about the topic. Students then go to the computer to read materials, respond to several shorter questions, and complete a longer essay or problem.

### scale score
Each year, in each subject area, a student will get an overall score between approximately 2000 and 3000. This score represents how well a student did on the test, and it corresponds to one of four achievement levels: Standard Exceeded, Standard Met, Standard Nearly Met, and Standard Not Met.

### Smarter Balanced Assessment Consortium
A state-led public agency, currently supported by member states and territories, that developed new tests that align to the new Common Core State Standards and measure student progress toward college and career readiness.

### STAR
The Standardized Testing and Reporting Program, the previous California assessment system that has been phased out.

### summative assessment
An assessment designed to be given near the end of the school year to evaluate a student’s knowledge and skills relative to a specific set of academic standards.

### test item
A question, problem, or task on a test. Test items may take different forms such as multiple choice, fill-in the blank or short answer, or constructed response (where students may write sentences or essays, or show how they solve a mathematics problem).
Appendix A: Other Assessments in the California Assessment of Student Performance and Progress System

California Alternate Assessment
Students in grades three through eight and grade eleven who have significant cognitive disabilities and whose individual education program requires that an alternate test be administered are eligible to take the California Alternate Assessment (CAA) instead of the Smarter Balanced Summative Assessments.

Required Assessments for Science
Students in grades five, eight, and ten continue to take the science assessments that were part of the California STAR program. These include the California Standards Test (CST); the California Modified Assessment (CMA), which can be taken by eligible students with disabilities; and the California Alternate Performance Assessment (CAPA), which may be taken by students with significant cognitive disabilities.

Optional Assessment: Reading/Language Arts
The Standards-based Test in Spanish (STS) for Reading/Language Arts is available for students in grades two through eleven who receive instruction in Spanish. This paper-based test, part of the previous STAR program, can be given to Spanish-speaking English learners who are learning language arts in Spanish and to English speakers who are learning Spanish through an immersion or dual language program.
Appendix B: Additional Resources

The links below provide additional information on the new state standards and CAASPP assessments.

**Common Core State Standards**

- **California Department of Education**
  
  [http://www.cde.ca.gov/re/cc/ccssresourcesparents.asp](http://www.cde.ca.gov/re/cc/ccssresourcesparents.asp)

  This Web page containing information for parents and students includes links to informational fliers, videos, Web sites, and other resources.

- **California State PTA**

  [http://capta.org/focus-areas/education/common-core/](http://capta.org/focus-areas/education/common-core/)

  This site provides informational fliers and documents, in multiple languages, about the standards and what children are learning at each grade level.

**New Assessments**

- **California Department of Education**

  This website provides variety of resources about the CAASPP system. The Students & Parent tab includes links to videos, fact sheets, practice and training tests, and other related information.

- **California State PTA**

  [http://capta.org/focus-areas/education/student-assessments/](http://capta.org/focus-areas/education/student-assessments/)

  This site provides information about the new assessments as well as a sample student report of test results.

- **Smarter Balanced Assessment Consortium**

  [http://www.smarterbalanced.org/parents-students/](http://www.smarterbalanced.org/parents-students/)

  This Web site, from the developers of the new ELA and mathematics tests, provides information about the new assessments, a downloadable fact sheet for parents, and links to other resources.
California Assessment of Student Performance and Progress
https://login3.cloud1.tds.airast.org/student/V112/Pages/LoginShell.aspx?c=California_PT&v=112
This Web site provides access to training and practice tests that parents and students can use to experience what the new assessment is like, including how the technology works and the kinds of questions and tasks that are on the new tests.
Appendix C: Scoring Rubric and Sample Responses
(Constructed Response)

This item is worth a possible two points (0, 1, or 2) and is hand scored.

**Scoring Rubric**

<table>
<thead>
<tr>
<th>Score</th>
<th>Rationale</th>
</tr>
</thead>
</table>
| 2     | A response:  
• Gives sufficient evidence of the ability to determine/summarize the theme/lesson/author’s message/main idea, or what happens after or during a key event  
• Includes specific examples/details that make clear reference to the text  
• Adequately explains the theme/lesson/author’s message/main idea, or what happens after or during a key event with clearly relevant information based on the text |
| 1     | A response:  
• Gives limited evidence of the ability to determine/summarize the theme/lesson/author’s message/main idea, or what happens after or during a key event  
• Includes vague/limited examples/details that make reference to the text  
• Explains the theme/lesson/author’s message/main idea, or what happens after or during a key event with vague/limited information based on the text |
| 0     | A response:  
• Gives no evidence of the ability to determine/summarize the theme/lesson/author’s message/main idea, or what happens after or during a key event  
   OR  
• Gives the theme/lesson/author’s message/main idea, or what happens after or during a key event, but includes no examples or no examples/details that make reference to the text  
   OR  
• Gives the theme/lesson/author’s message/main idea, or what happens after or during a key event, but includes no explanation or no relevant information from the text |

Sample responses that would earn a “0,” a “1,” and a “2” are provided on the next pages.  
The scoring rubric and sample responses are based on the Grade 3 constructed response item on pages 14–16.
Sample Responses

Score: 0 Points
The main idea is there are many steps to finding how people lived.

Think like a scientist and lots of things will tell you everything from the past

The main idea of the Finding the Clues is people that go around looking in places that people lived long ago for objects are called archaeologists.

The main idea of the paragraph is how archaeologists find clues on how it was in the past.

Score: 1 Point
The main idea of this passage is what a dig is and where to find a dig. It said a dig is a place where you dig to try to find how or where people used to live. It also said digs are usually in caves, a forest, a desert, or a modern city.

The main idea of the finding the clues is where and how to find artifacts. This section talks about where to find where people lived a long time ago. It also talks about how they have to be very careful and they have to use special tools to uncover dirt and sand.

The main idea is that they go places all around the world to find clues or artifacts. They used tools like small shovels and brushes. They studied the artifacts and carefully removed them from ground. They were very helpful to the people who visit them and get info.

Score: 2 Points
The main idea of “Finding the Clues” is about a dig site, what you do at a dig site, and finding artifacts. First, a site can be in a cave, a forest, a desert, or a modern city. At the site you first have to divide the ground into sections, and then you remove dirt from each section carefully. Special tools are used such as small shovels and brushes. You also have to search each section slowly. If you find tools or a piece of pottery, you photograph it, and notes are taken. After, you remove it from the ground carefully. These objects are called artifacts. Artifacts help explain how people lived in the past.

The main idea in Finding the Clues is finding the clues how people lived in the past requires careful study. They use special tools, each section must be searched slowly if a piece of pottery or a tool is found, it is photographed and notes are taken before it is removed from the ground.
